

HATCO® CORPORATION PRODUCT RELEASE

Expand Your Menu Offerings with Remote Hot/Cold Built-In Shelves

Hatco® Corporation's Hot/Cold Built-In Shelves are now available in remote configurations to offer design flexibility and easy serviceability. The insulated Remote Hot/Cold Shelves easily change between a Heated Shelf and a Cold Shelf – with a transfer time of approximately 30 minutes between the modes – so operators can cater to different food products and dayparts. The R models include a remote-mounted condensing unit and control panel for installing in more convenient and desirable locations; the X models include only a remote-mounted control panel for increased flexibility. The HCSBFR and HCSBFX models have a top mounted, hardcoat aluminum surface. The HCSSBR, HCSSBX, HCSSBFR and HCSSBFX models are available in Swanstone® simulated stone colors and are designed to be bottom mounted, flush with the countertop.
