

HATCO® CORPORATION PRODUCT RELEASE

Hatco Heated Base Glass Shelves Offer Stylish Foodwarming

Hatco® Corporation's Heated Base Glass Shelves are now available with black or white ceramic glass to match your décor. The ceramic glass creates a uniform heat across the entire surface to keep foods at safe-serving temperatures. The ceramic glass is made of approved foodsafe materials, allowing for direct placement of the products on the glass. The HBG is available as both portable and built-in. Adjustable thermostatic controls allow for easy control of the surface temperature, with a range of 100°F-195°F (38°C-90°C) for portable models and 100°F-200°F (38°C-93°C) for built-in models. All models are equipped with a trim mounting ring, available in standard Stainless Steel, *Designer* Black or White. The portable models also offer an optional angled food stop, which keeps product on the heat zone.
